

AZ1000-CP4 **TESTER TO CHECK CP4 PUMP**

AZ1000-CP4

NEW KIT TO TEST ALL THE COMMON RAIL PUMP ON THE TEST BENCH

Our kit AZ1000-CP4 is suitable to test on the test bench (with burette) all kind of common rail pumps now in the market (Bosch, Delphi, Denso and VDO), included also the new Bosch CP4 pumps currently assembled on millions of vehicles, in a fast, precise and easy way.

The choice to develop the kit AZ1000-CP4 was taken to test CP4 pumps with 2 elements to discern the pressure and the quantity produced by each single element.

In the way we created the heart of AZ1000-CP4, a **double-rail**, a rail with 2 separated and independent rooms.

The double-rail is assembled with nr. 2 pressure regulators, one for each room and nr. 2 digital mamometers, 2500 bar, to check the inner pressure of each single room.

The kit includes all the parts to check the pump on the test bench, all the mechanical and electrical parts.
